FLYIN' MIATA CATALYTIC CONVERTER

WARRANTY

Our Flyin' Miata comes with a two year warranty for **manufacturing defects**. This warranty does not cover damage caused from the road, through the installation process or anything that may cause the engine to misfire or run excessively rich. Some examples of situations that void the warranty are listed below.

Road Damage

When a catalytic converter hits something like a speed bump or rock, material inside fractures. This causes the material inside the catalytic converter to become misaligned, thus causing the converter to run hot and meltdown. When a meltdown occurs, the customer hears the "rattling sounds" coming from the catalytic converter. Hitting some road hazards may be unavoidable, but drive slowly over speed bumps.

Installation Damage

If the Flyin' Miata catalytic converter is dropped on the ground during installation the material inside fractures rendering it irreparably damaged and, like above, it will reach the meltdown stage very quickly.

Engine Misfire Damage

Anything that causes the engine to misfire or to dump raw fuel into the catalytic converter will cause over heating and a meltdown in the converter. Some things that can cause this are bad plug wires, spark plugs, valves and fuel pressure regulators.

Since any of the above situations will cause the catalytic converter to fail, but are not caused by a manufacturing defect, Flyin' Miata can not warrant catalytic converters that have failed due to these problems.
