**(ORDERS ONLY)**

This is the template for trimming the left rear fascia panel (bumper cover) to match the exhaust cut-out on the right side of the car. Trim this sheet along the lines, then peel and stick the template to the fascia. The left (driver's side) edge of the template should measure 5 & 7/8 inches from the phillips head screw on the bottom of the fascia, near the wheel well. Locate the template so its two ends (tips) are flush along the bottom of the fascia, then trim with a small sabre saw or coping saw. **TAKE A GOOD LOOK BEFORE YOU CUT, COMPARE TO THE RIGHT SIDE TO MAKE SURE YOU ARE IN THE RIGHT SPOT BEFORE CUTTING—YOU CANNOT UNCUT A HOLE!** There is normally about fifteen minutes of fearful measuring and looking, followed by a simple fifteen seconds of cutting.
